

## **HYBRID CARROT**

### **Sweetcuts (KXPC-055)**

**This a very long and slender Emperor type hybrid with excellent potential for manufactured baby carrot production**

KXPC-055 was developed for the Cut and Peel Market, but can also be used as a Cello type carrot with proper population spacing if a long carrot is needed.

This variety produces very smooth and long roots approximately 13"-15" long and about 3/4"-1" in diameter. The exterior and interior color is dark orange and core is very small almost invisible. It is sweet but not brittle. KXPC-055 produces strong tops 16"-18" tall and dark green in color.

It has performed well in numerous California locations and in Canada during the International Carrot Conference trial. Presently it is being tested in other carrot growing areas.

KXPC-055 is tolerant to premature bolting.
