

**CARROT HYBRID KXPC-060**  
**A slow growing Cut & Peel variety**

KXPC-060 is a slow growing and maturing variety. Perfect for summer growing when most varieties quickly become oversized. This variety will make perfect size 1.

It produces very long and slender roots. They are 11-13 inches long and about ½ inch or less in diameter. Excellent exterior and interior color and very small indistinct core.

The tops are very dark green in color, strong and about 16-19 inches tall. The best results were observed in the Northern States: Washington and in Wisconsin, but also can be grown in the Imperial and Salinas Valleys. KXPC-060 is tolerant to premature bolting.

Markets:

All Cut & Peel markets especially where slow growing and maturing carrot variety is needed.
