

**CARROT HYBRID KXPC-140**  
*A Cut and Peel Variety*

This is the first variety on the market with the *Nematode* tolerance. It produces slender roots that can be used for the Cut and Peel market. The root length is about 9 to 11 inches and about ½ to 5/8 inch in diameter. The roots are very smooth and dark orange in color, both exterior and interior.

KXPC-140 has strong and vigorous tops that are 19 to 22 inches tall and dark green in color.

This variety has shown good results in various trials and was rated in the 2002 University trial in El Centro number 20 of 83 varieties in the cut and peel type.

Parental lines of this variety have been flavor selected for many generations.

KXPC-140 is tolerant to *Meloidogyne jovanica* and *incognita*.

**Markets: All Cut & Peel carrot markets where Nematode tolerance is needed.**
