

CARROT HYBRID KXPC-087

A long Nantes type carrot with very strong and vigorous tops. The foliage is dark green in color and about 19 to 22 inches in height. Roots are very uniform, dark orange in color and in full maturity filled to the tip being almost cylindrical in shape.

Roots are about 7 to 8 inches in length and 1 ½ inches in diameter.

This unique variety matures early and produces carotene very early in root development.

It can be compared to Bangor variety but it is much earlier and gets color much faster.

No green shoulders.

In trial work done in the Salinas Valley, Australia and South Africa it shows resistance to *Powdery mildew* and good field tolerance to *Cavity spot*.

Also, KXPC-087 is resistant to premature bolting.

Markets: China, Mexico, South and Central America where Bangor variety is grown and where earliness and disease resistance is important or under poor growing conditions. It can replace Bangor variety especially under short growing season.
