

CARROT HYBRID KXPC - 133
Nantes Type Carrot

Hybrid KXPC-133 is a typical Nantes type Carrot. It produces roots that are 6 ½ to 7 ½ inches long and about 1 ½ to 1 ¾ inches in diameter and cylindrical in shape at full maturity.

This variety produces very strong and vigorous tops 17 to 19 inches tall and dark green in color. Both interior and exterior color of the roots are dark orange with small core.

No green shoulders in KXPC -133. This carrot has great bunching potential.

This variety has shown some tolerance to *Cercospora carotae* and *Alternaria dauci* in the field trials in Salinas Valley, Australia and South Africa.

KXPC-133 has also shown resistance to premature bolting and had very good flavor.

Markets: Australia, Mexico, South Africa, Central and South America, China, Canada and cello & bunching carrot markets in Europe.
