

## **CARROT VARIETY KXPC- 304**

### *A Nantes Type Variety*

KXPC-304 produces very uniform roots but grows a little slow in comparison with KXPC-133 or 081.

It produces strong, bushy tops that are 16 to 18 inches tall and dark green in color.

The roots are usually slightly tapered but at full maturity they can be cylindrical in shape.

The roots can be 4 to 6 inches long or, if given space, can reach 7 to 8 inches.

This variety is tolerant to premature bolting and was selected for many generations for flavor.

Markets: True “Baby” carrot market, cello pack carrot or bunching carrot.
